

```
#include<iostream>

using namespace std;

class Person{
public:
    int m_Age;

    void showClassName(){
        cout<<"this is Person class"<<endl;
    }

    void showPersonAge(){
        cout<<"age="<<m_Age<<endl;
    }
};

int main(){
    Person* p=NULL;
    //可以运行
    p->showClassName();
    //不能运行
    p->showPersonAge();
}
```
