

```
#include<iostream>

using namespace std;

void MyPrint02(string test);

class MyPrint{
public:

    //重载函数调用运算符
    //仿函数
    void operator()(string test){
        cout<<test<<endl;
    }
};

void MyPrint02(string test){
    cout<<test<<endl;
}

void test01(){
    MyPrint mprint;
    mprint("hello world");
    MyPrint02("hello world");
}

int main(){
    test01();
}
```
